

**Blackberry configuration settings for Stock Ticker**

Case 1: Connection to the network established via corporate Blackberry server, that is via the BES (Blackberry Enterprise Server)

- a. Have your IT admin set the TCP settings on your blackberry, via Settings->Options->TCP (or Tools->TCP)
- b. Ask your IT admin to ensure that the BES is configured to allow 3rd party applications to connect to the internet. The section on 'Administrative Control' on page 3 of the BES-ApplicationDeployment.pdf file from Blackberry explains how this can be done.

Case 2: Connection to the network established via mobile operator's Blackberry service

- a. Set the TCP settings on your blackberry, via Settings->Options->TCP (or Tools->TCP). The settings for various operators are given below. If these settings do not work, please take a look at the discussion on this subject in <http://www.blackberryforums.com/showpost.php?p=20157&postcount=1> to resolve operator related network connectivity issues.

Operator	APN	Username	Password
AT&T	proxy		
Rogers	internet.com		
T-Mobile	wap.voicestream.com		
Cingular	wap.cingular	<a href="mailto:WAP@CINGULARGPRS.COM">WAP@CINGULARGPRS.COM</a>	CINGULAR1
